

# Finding Fractions

**Learning Objective:**

To recognise simple equivalent fractions

# This is a fraction wall.

What can you tell me about the different fractions using this wall?

Think, pair, then share your ideas.

# How many of these observations did you make?

I can see that there are two halves in a whole. One half is smaller than a whole.

$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$

I can see that there are four quarters in a whole. One quarter is smaller than one half.

Next

I can see that there are eight eighths in a whole. One eighth is smaller than one quarter.

# Did you also spot that...

$\frac{1}{2}$				$\frac{1}{2}$			
$\frac{1}{4}$		$\frac{1}{4}$		$\frac{1}{4}$		$\frac{1}{4}$	
$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$

One half has the  
**same value** as two  
quarters!

$$\frac{1}{2} = \frac{2}{4}$$

Can you find any other combinations of fractions  
that have the same value as **one half**?

Three quarters have  
the **same value** as six  
eighths!

$$\frac{3}{4} = \frac{6}{8}$$

If two fractions have the **same value**, they have a  
special name...

Back

They are called **equivalent** fractions.

$$\frac{1}{2} = \underline{\hspace{2cm}}$$

$$\frac{1}{4} = \underline{\hspace{2cm}}$$

$$\frac{2}{4} = \underline{\hspace{2cm}}$$

$$\frac{3}{4} = \underline{\hspace{2cm}}$$

With a partner, and using the fraction wall, can you fill in the missing equivalent fractions?

# Did you find all of the equivalent fractions?

$$\frac{1}{2} = \frac{2}{4}$$

$$\frac{1}{2} = \frac{4}{8}$$

$$\frac{1}{4} = \frac{2}{8}$$

$$\frac{2}{4} = \frac{4}{8}$$

$$\frac{3}{4} = \frac{6}{8}$$
